EQUASP project

The aim of EQUASP project is the definition and implementation of an online documentation and monitoring system for the quality assurance (QA) of study programmes (SPs) in the Russian Federation, consistent with the European Standards and Guidelines for Quality Assurance, in order to promote their quality, transparency and comparability at national and international level.

The first steps of the project regarded the definition of the EQUASP Standards and Guidelines for internal QA of SPs. Contextually, the questionnaires for the monitoring of the SPs' quality perceived by stakeholders have been defined.

The following steps of the project regarded the identification of the responsibilities and facilities for the documentation of the QA of SPs in the Partner Universities and the design and production of the software for the on-line documentation of the QA of SPs and of the software for the on-line monitoring of the SPs' quality perceived by stakeholders. The final steps regard the implementation of the responsibilities and facilities and of the software for the on-line documentation of the QA of SPs in the Partner Universities.

YEKATERINBURG workshops

The implementation of the responsibilities and facilities and of the **software for the on-line documentation** of the QA of SPs in the Partner Universities will be presented and discussed in the two workshops, as final result of the cooperation among all the project partners.
